FOR IMMEDIATE RELEASE

IdentityPlane Awarded Cyber Security Agency of Singapore (CSA) Grant to Pioneer Sovereign Identity Governance for AI and Human Workforces

SINGAPORE, 16 November 2026

IdentityPlane, a Singapore-based cloud-native cybersecurity and AI research startup, has been awarded funding by the Cyber Security Agency of Singapore (CSA) under the highly competitive CyberCall 2025 initiative. The grant will accelerate the development of IdentityPlane's next-generation sovereign identity platform, designed to unify identity governance for both human workforces and autonomous AI agents.

The award was officially announced at the CyberSG Innovation Day 2026 on the 10th of November. During the exhibition, IdentityPlane was honored to host the Minister of State for Digital Development and Information, Ms. Rahayu Mahzam, at its booth. Echoing the Minister of State's emphasis on the need for strong safeguards and oversight as Agentic AI becomes a reality, discussions centered on the escalating threat of Agentic Cyberattacks. The team also addressed a critical operational challenge facing modern security teams: the struggle CISOs face in prioritizing an overwhelmingly high and increasing volume of security findings.

This aligns closely with the event's keynote address by Ms. Gwenda Fong, Commissioner of Cybersecurity and Chief Executive of CSA, who highlighted that as AI changes the speed and scale of cyberattacks, the industry must develop new approaches to ensure critical systems remain secure and resilient.

As organizations rapidly integrate agentic AI into their operations, traditional Identity and Access Management (IAM) infrastructures face unprecedented challenges. IdentityPlane intimately understands this operational gap through the development of its own software, PurpleSwarm.ai, a platform for autonomous penetration testing. To operate PurpleSwarm.ai securely at massive scale, IdentityPlane developed its proprietary agentic identities to seamlessly govern and secure the thousands of autonomous AI agents it runs simultaneously.

We take these learnings with us as we further develop our open-source IAM solution, GoAM. Just as the Go programming language was built by extracting the best features of its predecessors, GoAM synthesizes the best of modern IAM capabilities and specializes them for Singaporean organizations. By combining our zero-trust graph engine with native Singpass integration, it manages both high-volume machine agents and human identities with ease, extensibility, and absolute data sovereignty.

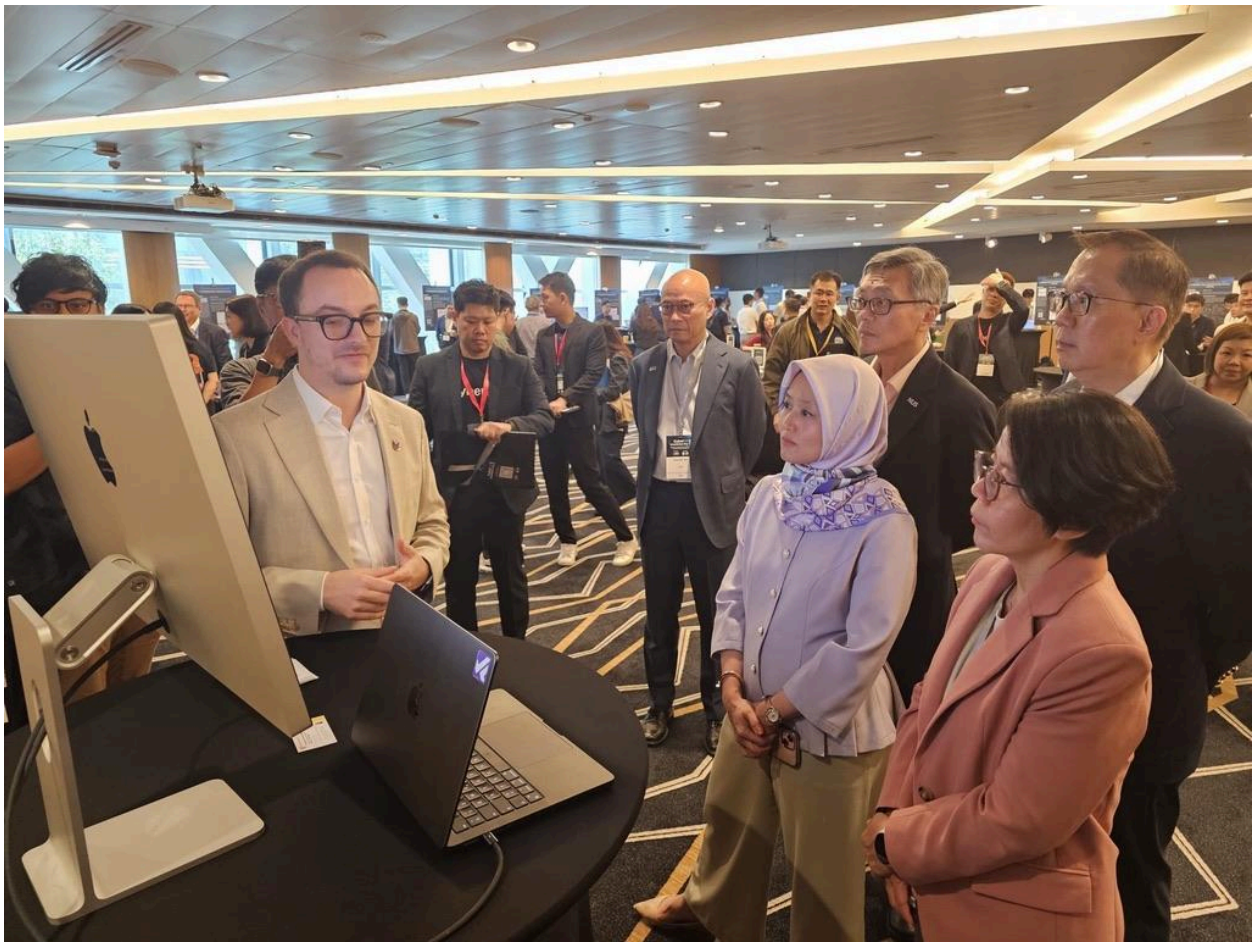

We are deeply honored by the support from CSA and the opportunity to share our vision with Minister of State Ms. Rahayu Mahzam. As Commissioner Gwenda Fong noted, today's solutions are no longer sufficient for tomorrow's AI-driven threats. Through building PurpleSwarm.ai, we realized that securing thousands of AI agents requires a fundamental shift in identity management. This grant empowers us to bring GoAM, our sovereign, verifiable identityPlane to the broader market, helping CISOs secure the future of AI-driven enterprises.

The CyberCall 2025 initiative, managed by the NUSX Talent, Innovation and Growth Collaboration Centre (TIG Centre), seeks to catalyze the development of novel cybersecurity solutions to meet national and strategic needs. IdentityPlane's platform directly supports the Singapore Cybersecurity Strategy 2026 mandate to develop globally competitive, trusted cybersecurity capabilities for Critical Information Infrastructure (CII) and the broader industry.

About IdentityPlane:
IdentityPlane is a Singapore-based cloud-native cybersecurity and AI research startup specializing in offensive security and modern identity and access management (IAM). Trusted by organizations across Asia-Pacific and Europe, IdentityPlane brings deep expertise in architecting major enterprise deployments and securing global identity infrastructures. The company's solutions include PurpleSwarm.ai, an agentic AI platform for autonomous penetration testing, and GoAM, an open-source, graph-based IAM platform.
